HOUSEHOLDS BY TYPE						
Total households		28,376		27,270	)	29,482
Family households (families)		17,462		16,185	;	18,739

NOTE. Data are limited to the household population and exclude the population living in institutions, college dormitories, and other group quarters. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

General Demographic Characteristics: 2004	Estimate L	ower Bound	Upper Bound
With own children under 18 years	8,079	7,152	9,006
Married-couple families	13,677	12,458	14,896
With own children under 18 years	5,839	4,923	6,755
Female householder, no husband present	2,935	2,335	3,535
With own children under 18 years	1,825	1,318	2,332
Nonfamily households	10,914	9,705	12,123
Householder living alone	9,262	8,237	10,287
65 years and over	3,834	3,126	4,542
Households with one or more people under 18 years	8,870	7,888	9,852
Households with one or more people 65 years and over	7,347	6,681	8,013
Average household size	2.36	2.28	2.44
Average family size	2.96	2.83	3.09

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a confidence interval. The interval shown here is a 90 percent confidence interval. The stated range can be interpreted roughly as providing a 90 percent probability that the interval defined by the lower and upper bounds contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data).

The effect of nonsampling error is not represented in these tables.

### Notes:

• The number of householders does not necessarily equal the number of households because of differences in the weighting schemes for the population and occupied housing units.

• For more information on understanding race and Hispanic origin data, please see the Census 2000 Brief entitled, Overview of Race and Hispanic Origin, issued March 2001. (pdf format)

### Explanation of Symbols:

1. An <sup>\*\*</sup> entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.

2. An <sup>\*\*\*\*</sup> entry in the lower and upper bound columns indicates that no sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.

3. An '-' entry in the estimate column indicates that no sample observations were available to compute an estimate.

4. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

5. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.

6. An '\*\*\*' entry in the lower and upper bound columns indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

7. An '\*\*\*\*\*' entry in the lower and upper bound columns indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate. 8. An 'N' entry in the estimate, lower bound, and upper bound columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

Lithuanian	0	0	382
Norwegian	3,009	1,896	4,122
Polish	646	275	1,017
Portuguese	0	0	382
Russian	238	9	467
Scotch-Irish	1,028	584	1,472
Scottish	804	289	1,319
Slovak	0	0	382
Subsaharan African	253	0	609
Swedish	1,010	526	1,494
Swiss	126	24	228
Ukrainian	41	0	112
Welsh	124	4	244
West Indian (excluding Hispanic origin groups)	146	0	387

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a confidence interval. The interval shown here is a 90 percent confidence interval. The stated range can be interpreted roughly as providing a 90 percent probability that the interval defined by the lower and upper bounds contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

#### Notes:

Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for Russian represents the number of
people who listed Russian as either their first or second ancestry. This table lists only the largest ancestry groups; see the Detailed Tables for more categories. Race and Hispanic
origin groups are not included in this table because official data for those groups come from the Race and Hispanic origin questions rather than the ancestry question (see
Demographic Table).

The Census Bureau introduced a new skip pattern for the disability questions in the 2003 ACS questionnaire. This change mainly affected two individual items -- go-outside-home disability and employment disability -- and the recode for disability status, which includes the two items. Accordingly, comparisons of data from 2003 or later with data from prior years are not recommended for the relevant questions. For more information, see the ACS Subject Definitions for Disability.

• Data for year of entry of the native population reflect the year of entry into the U.S. by people who were born in Puerto Rico, U.S. Island Areas or born outside the U.S. to a U.S. citizen parent and who subsequently moved to the U.S.

### Explanation of Symbols:

1. An '\*' entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard error

and thus the lower and upper bounds. A statistical test is not appropriate.

2. An '\*\*' entry in the lower and upper bound columns indicates that no sample observations were available to compute a standard error and

thus the lower and upper bounds. A statistical test is not appropriate.

3. An '-' entry in the estimate column indicates that no sample observations were available to compute an estimate.

4. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

5. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.

6. An '\*\*\*' entry in the lower and upper bound columns indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

7. An '\*\*\*\*\*' entry in the lower and upper bound columns indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

8. An 'N' entry in the estimate, lower bound, and upper bound columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

Under 18 years	22.6	15.5	29.7
Related children under 18 years	22.4	15.3	29.5
Related children under 5 years	21.2	14.4	28
Related children 5 to 17 years	22.9	14.4	31.4
18 years and over	11.9	9.3	14.5
18 to 64 years	13.9	10.8	17
65 years and over	3.8	1.5	6.1
People in families	13.7	9.8	17.6
Unrelated individuals 15 years and over	20.8	16.3	25.3

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a confidence interval. The interval shown here is a 90 percent confidence interval. The stated range can be interpreted roughly as providing a 90 percent probability that the interval defined by the lower and upper bounds contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

### Notes:

The number of householders does not necessarily equal the number of households because of differences in the weighting schemes for the population and occupied housing units.

• Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in survey design and data collection. For guidance on differences in employment and unemployment estimates from different sources go to Labor Force Guidance.

 $\cdot$  Workers include members of the Armed Forces and civilians who were at work last week.

· Occupation codes are 4-digit codes, but are still based on Standard Occupational Classification 2000.

Industry codes are 4-digit codes and are based on the North American Industry Classification System 2002. However, the Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies

### Explanation of Symbols:

1. An 1\*\* entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard error

and thus the lower and upper bounds. A statistical test is not appropriate.

2. An '\*\*' entry in the lower and upper bound columns indicates that no sample observations were available to compute a standard error and

thus the lower and upper bounds. A statistical test is not appropriate.

### 3. An '-' entry in the estimate column indicates that no sample observations were available to compute an estimate.

4. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

5. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.

6. An "\*\*\*\* entry in the lower and upper bound columns indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

7. An '\*\*\*\*\*' entry in the lower and upper bound columns indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

8. An 'N' entry in the estimate, lower bound, and upper bound columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
