Source: U.S. Census Bureau, 2005 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

-The number of householders does not necessarily equal the number of households because of differences in the weighting schemes for the population and occupied housing units.

-For more information on understanding race and Hispanic origin data, please see the Census 2000 Brief entitled, Overview of Race and Hispanic

Explanation of Symbols:

1. An '\*' entry in the margin of error column indicates that too few sample
2. An '\*\*' entry in the margin of error column indicates that no sample obs
3. An '-' entry in the estimate column indicates that no sample observator
4. An '-' following a median estimate means the median falls in the lowest
5. An '+' following a median estimate means the median falls in the upper

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

-Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for Russian represents the number of people who listed Russian as either their first or second ancestry. This table lists only the largest ancestry group.

-The Census Bureau introduced a new skip pattern for the disability question.

-Data for year of entry of the native population reflect the year of entry into the United States.

Explanation of Symbols:

1. An '\*' entry in the margin of error column indicates that too few sample observations were available to calculate a margin of error.
2. An '\*\*' entry in the margin of error column indicates that no sample observations were available to calculate a margin of error.
3. An '-' entry in the estimate column indicates that no sample observations were available to calculate an estimate.
4. An '-' following a median estimate means the median falls in the lowest category.
5. An '+' following a median estimate means the median falls in the upper category.
6. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest category.
7. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is not applicable or not available.
8. An 'N' entry in the estimate and margin of error columns indicates that the estimate is not applicable or not available.
9. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

- The number of householders does not necessarily equal the number of households because of differences in the weighting schemes for the population and occupied housing units.
- Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in the definitions.
- Workers include members of the Armed Forces and civilians who were at work on the reference date.
- Occupation codes are 4-digit codes, but are still based on Standard Occupational Classification (SOC) codes.
- Industry codes are 4-digit codes and are based on the North American Industry Classification System (NAICS) codes.

Explanation of Symbols:

1. An '\*' entry in the margin of error column indicates that too few sample observations were available to calculate a margin of error.
2. An '\*\*' entry in the margin of error column indicates that no sample observations were available to calculate a margin of error.
3. An '-' entry in the estimate column indicates that no sample observations were available to calculate an estimate.
4. An '-' following a median estimate means the median falls in the lowest category.
5. An '+' following a median estimate means the median falls in the upper category.
6. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest category.
7. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is not applicable or not available.
8. An 'N' entry in the estimate and margin of error columns indicates that no sample observations were available to calculate an estimate or a margin of error.
9. An '(X)' means that the estimate is not applicable or not available.
