NOTE: Data based on a sample. For information on confidentiality protection, sampling error, nonsampling error, definitions, and count corrections see <http://factfinder.census.gov/home/en/datanotes/expsf3.htm>.

¹ Based on data for places with either 2,500 workers living in the place or 2,500 workers working in the place.

² Workers – people 16 years and over who were employed and at work during the reference week. The reference week is the week prior to the time the census form was filled out or the census data were collected.

³ Employment-residence (E-R) ratios - this is a measure of the total number of workers working in an area or place, relative to the total number of workers living in the area or place. It is often used as a rough indication of the jobs-workers balance of an area. E-R ratios greater than 1.00 occur when there are more workers working in the area than living there. These areas can be considered as net importers of labor. Values less than 1.00 indicate areas that send more workers to other areas than they receive, i.e., they are net exporters of labor.
