Selected Social Characteristics in the United States: 2005-2007 Data Set: 2005-2007 American Community Survey 3-Year Estimates Survey: American Community Survey Geographic Area: Johnson County, Iowa

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties. For more information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

Hispanic origin groups)	41	+/-47	0.0%	+/-0.1

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussic of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

#### Notes:

Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for Russian represents the number of people who listed Russian as either their first or second ancestry. This table lists only the largest ancestry groups; see the Detailed Tables for more categories. Race and Hispanic origin groups are not included in this table because official data for those groups come from the Race and Hispanic origin questions rather than the ancestry question (see Demographic Table).

•The Census Bureau introduced a new skip pattern for the disability questions in the 2003 ACS questionnaire. This change mainly affected two individual items -- go-outside-home disability and employment disability -- and the recode for disability status, which includes the two items. Accordingly, comparisons of data from 2003 or later with data from prior years are not recommended for the relevant questions. For more information, see the ACS Subject Definitions for Disability.

•Data for year of entry of the native population reflect the year of entry into the U.S. by people who were born in Puerto Rico, U.S. Island Areas or born outside the U.S. to a U.S. citizen parent and who subsequently moved to the U.S.

While the 2007 American Community Survey (ACS) data generally reflect the December 2006 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities. The 2007 Puerto Rico Community Survey (PRCS) data generally reflect the December 2005 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in PRCS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

•Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

### Explanation of Symbols:

1. An '\*\*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.

5. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an openended distribution. A statistical test is not appropriate.

6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

8. An '(X)' means that the estimate is not applicable or not available.

Selected Economic Characteristics: 2005-2007 Data Set: 2005-2007 American Community Survey 3-Year Estimates Survey: American Community Survey Geographic Area: Johnson County, Iowa

NOTE. Although the American Community Survey (ACS) produces population, demographic and he is the Census Bureau's Population Estimates Program that produces and disseminates the official e population for the nation, states, counties, cities and towns and estimates of housing units for states. For more information on confidentiality protection, sampling error, nonsampling error, and definition Methodology.

Г

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for a sampling variability is represented through the use of a margin of error. The value shown here is the error. The margin of error can be interpreted roughly as providing a 90 percent probability that the in estimate minus the margin of error and the estimate plus the margin of error (the lower and upper c contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsam discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is these tables.

### Notes:

•Employment and unemployment estimates may vary from the official labor force data released by Statistics because of differences in survey design and data collection. For guidance on differences unemployment estimates from different sources go to Labor Force Guidance.

Workers include members of the Armed Forces and civilians who were at work last week.

Occupation codes are 4-digit codes and are based on Standard Occupational Classification 2000.

Industry codes are 4-digit codes and are based on the North American Industry Classification Sys Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alt Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.

•While the 2007 American Community Survey (ACS) data generally reflect the December 2006 Off Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to d effective dates of the geographic entities. The 2007 Puerto Rico Community Survey (PRCS) data g December 2005 Office of Management and Budget (OMB) definitions of metropolitan and micropoli certain instances the names, codes, and boundaries of the principal cities shown in PRCS tables m definitions due to differences in the effective dates of the geographic entities.

•Estimates of urban and rural population, housing units, and characteristics reflect boundaries of ur based on Census 2000 data. Boundaries for urban areas have not been updated since Census 200 urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## Explanation of Symbols:

1. An '\*\*' entry in the margin of error column indicates that either no sample observations or too fev were available to compute a standard error and thus the margin of error. A statistical test is not app

2. An '-' entry in the estimate column indicates that either no sample observations or too few sampl available to compute an estimate, or a ratio of medians cannot be calculated because one or both c falls in the lowest interval or upper interval of an open-ended distribution.

3. An '-' following a median estimate means the median falls in the lowest interval of an open-ende

4. An '+' following a median estimate means the median falls in the upper interval of an open-ende

5. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval o open-ended distribution. A statistical test is not appropriate.

6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistica variability is not appropriate.

7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic a because the number of sample cases is too small.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for a sampling variability is represented through the use of a margin of error. The value shown here is the error. The margin of error can be interpreted roughly as providing a 90 percent probability that the in estimate minus the margin of error and the estimate plus the margin of error (the lower and upper c contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsarr discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is these tables.

Notes:

•The median gross rent excludes no cash renters.

•The estimate for median value, mortgage status and selected monthly owner costs, median mortg monthly owner costs, gross rent, and median gross rent for previous years is adjusted for inflation to

While the 2007 American Community Survey (ACS) data generally reflect the December 2006 Off Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to d effective dates of the geographic entities. The 2007 Puerto Rico Community Survey (PRCS) data g December 2005 Office of Management and Budget (OMB) definitions of metropolitan and micropoli certain instances the names, codes, and boundaries of the principal cities shown in PRCS tables m definitions due to differences in the effective dates of the geographic entities.

•Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urbased on Census 2000 data. Boundaries for urban areas have not been updated since Census 200 urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '\*\*' entry in the margin of error column indicates that either no sample observations or too fev were available to compute a standard error and thus the margin of error. A statistical test is not app

2. An '-' entry in the estimate column indicates that either no sample observations or too few sampl available to compute an estimate, or a ratio of medians cannot be calculated because one or both c falls in the lowest interval or upper interval of an open-ended distribution.

3. An '-' following a median estimate means the median falls in the lowest interval of an open-ende

4. An '+' following a median estimate means the median falls in the upper interval of an open-ende

5. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval o open-ended distribution. A statistical test is not appropriate.

6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistica variability is not appropriate.

7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic a because the number of sample cases is too small.

8. An '(X)' means that the estimate is not applicable or not available.

Cuban	53	+/-59	0.0%
Latino	1,080	+/-359	0.9%
Not Hispanic or Latino	119,635	****	96.8%
White alone	107,186	+/-98	86.8%
American alone	4,759	+/-271	3.9%
Alaska Native alone	213	+/-177	0.2%
Asian alone	6,062	+/-254	4.9%
Other Pacific Islander	0	+/-127	0.0%
alone	159	+/-98	0.1%
Two or more races	1,256	+/-373	1.0%
Some other race	0	+/-127	0.0%
excluding Some	1,256	+/-373	1.0%
Total housing units	53,665	+/-90	100%

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for a sampling variability is represented through the use of a margin of error. The value shown here is the error. The margin of error can be interpreted roughly as providing a 90 percent probability that the in estimate minus the margin of error and the estimate plus the margin of error (the lower and upper c contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsarr discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is these tables.

## Notes:

•For more information on understanding race and Hispanic origin data, please see the Census 200 Overview of Race and Hispanic Origin, issued March 2001. (pdf format)

While the 2007 American Community Survey (ACS) data generally reflect the December 2006 Off Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to d effective dates of the geographic entities. The 2007 Puerto Rico Community Survey (PRCS) data g December 2005 Office of Management and Budget (OMB) definitions of metropolitan and micropoli certain instances the names, codes, and boundaries of the principal cities shown in PRCS tables m definitions due to differences in the effective dates of the geographic entities.

•Estimates of urban and rural population, housing units, and characteristics reflect boundaries of ur based on Census 2000 data. Boundaries for urban areas have not been updated since Census 200 urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## Explanation of Symbols:

1. An '\*\*' entry in the margin of error column indicates that either no sample observations or too fev were available to compute a standard error and thus the margin of error. A statistical test is not app

2. An '-' entry in the estimate column indicates that either no sample observations or too few sampl available to compute an estimate, or a ratio of medians cannot be calculated because one or both c falls in the lowest interval or upper interval of an open-ended distribution.

3. An '-' following a median estimate means the median falls in the lowest interval of an open-ende

4. An '+' following a median estimate means the median falls in the upper interval of an open-ende

5. An '\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval o open-ended distribution. A statistical test is not appropriate.

6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistica variability is not appropriate.

7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic a because the number of sample cases is too small.

8. An '(X)' means that the estimate is not applicable or not available.

ousing unit estimates, it estimates of the s and counties is, see Survey
