Health Profile

As the number of total births in Appanoose County rose from 1999 to 2003, the number of births to teens decreased by 2. In 1999, births to teens accounted for 13.3 percent of total births in the county compared to 10.4 percent in 2003.

Teen parenting is used as a predictor of future economic hardship for both parents and children. Teen parents are often less able to provide positive, safe and caring environments, or family stability.

In Appanoose County, 9.3 percent of total births in 2003 were low birthweight compared to 6.6 percent statewide.

Low birthweight (less than 5.5 pounds or 2,500 grams) can be an indicator of mothers not receiving adequate prenatal care and is often a good predictor of future health and developmental complications.

Early and ongoing prenatal care increases the chances of delivering healthy, full-term, and normal weight babies. Rates are per 1,000 live births.

For the period from 1998 to 2001, the rate of mothers in Appanoose County receiving prenatal care during the first trimester of their pregnancy was 844.9 compared to 869.8 statewide.

*NOTE: Immunization data reflect only one site per county so should be interpreted with caution.

In Appanoose County in 2003, 94 percent of children 24 months of age were reported to be fully immunized compared to 89 percent in 1999. Percentages for the state were 89 in 2003 and 84 in 1999.

Fully immunized = 4 DTP/DTaP, 3 Polio, 1 MMR, 3 Hib, 3 Hep. B by 24 months of age.

Infant mortality is considered one of the best overall measures of health care accessibility and quality in that it measures the health of the most vulnerable in a given population. The infant mortality rate is the number of infants who die before their first birthday per 1,000 live births.

In Appanoose County, the infant mortality rate from 2001 to 2003 was 2.1, lower than the county rate of 1995-1998 and lower than the statewide rate of 5.5 in 2001-2003 period.

NOTE: Due to the relatively low number of births, infant deaths, and child deaths per year in many of Iowa's counties, users are encouraged to use 3-5 year averages for comparative purposes. These are presented in Tables 3 and 4.
