Health Profile

As the number of total births in Hardin County dropped from 2000 to 2004, the number of births to teens decreased by 0. In 2000, births to teens accounted for 10.6 percent of total births in the county compared to 11.0 percent in 2004.

Teen parenting is used as a predictor of future economic hardship for both parents and children. Teen parents are often less able to provide positive, safe and caring environments, or family stability.

In Hardin County, 9.5 percent of total births in 2004 were low birthweight compared to 7.0 percent statewide.

Low birthweight (less than 5.5 pounds or 2,500 grams) can be an indicator of mothers not receiving adequate prenatal care and is often a good predictor of future health and developmental complications.

Early and ongoing prenatal care increases the chances of delivering healthy, full-term, and normal weight babies. Rates are per 1,000 live births.

For the period from 2002 to 2003, the rate of mothers in Hardin County receiving prenatal care during the first trimester of their pregnancy was 888.3 compared to 886.2 statewide.

*NOTE: Immunization data reflect only one site per county so should be interpreted with caution.

In Hardin County in 2004, 90 percent of children 24 months of age were reported to be fully immunized compared to 91 percent in 2000. Percentages for the state were 89 in 2004 and 84 in 2000.

Fully immunized = 4 DTP/DTaP, 3 Polio, 1 MMR, 3 Hib, 3 Hep. B by 24 months of age.

Infant mortality is considered one of the best overall measures of health care accessibility and quality in that it measures the health of the most vulnerable in a given population. The infant mortality rate is the number of infants who die before their first birthday per 1,000 live births.

In Hardin County, the infant mortality rate from 2002 to 2004 was 7.9, higher than the county rate of 1999-2001 and higher than the statewide rate of 5.3 in the 2002-2004 period.

NOTE: Due to the relatively low number of births, infant deaths, and child deaths per year in many of Iowa's counties, users are encouraged to use 3-5 year averages for comparative purposes. These are presented in Tables 3 and 4.
