¹ Each child is considered relevant to one and only one district. If a district provides all K-12 grades throughout their territory, all children within the territory are relevant to that district. If an elementary and secondary district occupy the same territory, the child is relevant to the district that provides the grade for that child's age.

Beginning with the estimates for 2005, data from the American Community Survey were used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the Current Population Survey.

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals).

Comparisons between 2008-2005 SAIPE estimates (based on ACS data) and SAIPE estimates for previous years (based on CPS ASEC data) are not advised because there is a break in the time-series due to the switch from CPS ASEC to ACS data. In future years, comparisons at the state-level estimates will be possible.

Estimated Population and Number of Children Age 5 to 17 in Poverty for Iowa School Districts: 2008
 (Note: In Excel, to view other years select the tabs at the bottom of the page)

District ID	District name	Estimated Total Population	Estimated Population 5-17	Estimated number of relevant children 5 to 17 years old in poverty who are related to the householder ¹
-------------	---------------	----------------------------	---------------------------	--

¹ Each child is considered relevant to one and only one district. If a district provides all K-12 grades throughout their territory, all children within the territory are relevant to that district. If an elementary and secondary district occupy the same territory, the child is relevant to the district that provides the grade for that child's age.

Beginning with the estimates for 2005, data from the American Community Survey were used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the Current Population Survey.

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals).

Comparisons between 2008-2005 SAIPE estimates (based on ACS data) and SAIPE estimates for previous years (based on CPS ASEC data) are not advised because there is a break in the time-series due to the switch from CPS ASEC to ACS data. In future years, comparisons at the state-level estimates will be possible.

¹ Each child is considered relevant to one and only one district. If a district provides all K-12 grades throughout their territory, all children within the territory are relevant to that district. If an elementary and secondary district occupy the same territory, the child is relevant to the district that provides the grade for that child's age.

Beginning with the estimates for 2005, data from the American Community Survey were used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the Current Population Survey.

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals).

Comparisons between 2005 SAIPE estimates (based on ACS data) and SAIPE estimates for previous years (based on CPS ASEC data) are not advised because there is a break in the time-series due to the switch from CPS ASEC to ACS data. In future years, comparisons at the state-level estimates will be possible.

¹ Each child is considered relevant to one and only one district. If a district provides all K-12 grades throughout their territory, all children within the territory are relevant to that district. If an elementary and secondary district occupy the same territory, the child is relevant to the district that provides the grade for that child's age.

Beginning with the estimates for 2005, data from the American Community Survey were used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the Current Population Survey.

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals).

Comparisons between 2005 SAIPE estimates (based on ACS data) and SAIPE estimates for previous years (based on CPS ASEC data) are not advised because there is a break in the time-series due to the switch from CPS ASEC to ACS data. In future years, comparisons at the state-level estimates will be possible.

1932010	WOODWARD-GRANGER COMMUNITY SCHOOL DISTRICT	4,931	1,015	62

¹ Each child is considered relevant to one and only one district. If a district provides all K-12 grades throughout their territory, all children within the territory are relevant to that district. If an elementary and secondary district occupy the same territory, the child is relevant to the district that provides the grade for that child's age.

Beginning with the estimates for 2005, data from the American Community Survey were used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the Current Population Survey.

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals).

Comparisons between 2005 SAIPE estimates (based on ACS data) and SAIPE estimates for previous years (based on CPS ASEC data) are not advised because there is a break in the time-series due to the switch from CPS ASEC to ACS data. In future years, comparisons at the state-level estimates will be possible.

Estimated Population and Number of Children Age 5 to 17 in Poverty for Iowa School Districts: 2005

-------------	---------------	----------------------------	--------------------------------	---

There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals (please see a basic explanation of confidence intervals). Before attempting to compare census estimates and model-based estimates, model-based estimates for the same county in different years, model-based estimates for the same state in different years, or model-based estimates for different counties in the same year, please see the General Cautions page.

SAIPE 2003 school district estimates were revised on October 2, 2006. The revision is described at <http://www.census.gov/hhes/www/saipe/datarev03.html>.

Revised and corrected estimates of poverty and median household income for 2003 from the Small Area Income and Poverty Estimates (SAIPE) program were released on October 2, 2006. The release includes revisions to estimates of the number of school-age children in poverty for school districts [xls 2.1 MB]. The SAIPE program data are used as input to the Department of Education's annual Title I allocations as part of the No Child Left Behind Act.

The SAIPE program uses a number of data sources as input to its statistical models. One source is the Annual Social and Economic Supplement to the Current Population Survey (ASEC). Another source is federal tax information.

The 2005 ASEC data used for the 2003 SAIPE estimates were originally released in August 2005, but were adjusted after an internal review of the original ASEC sample weights. The revised ASEC data were released in August 2006, and an announcement was made at that time.

The decision to revise and re-issue the SAIPE program's estimates was largely driven by the need to revise the ASEC data. However, we used the opportunity to also revise for other changes. First, Census Bureau statisticians looked at how the SAIPE program used the 2003 federal tax information. Second, updates were made in some of the definitions used in the processing of the ASEC poverty and income data.

[There is uncertainty associated with all estimates in this program. Where possible, we quantify this uncertainty through confidence intervals \(please see a basic explanation of confidence intervals\).](#)

[Before attempting to compare census estimates and model-based estimates, model-based estimates for the same county in different years, model-based estimates for the same state in different years, or model-based estimates for different counties in the same year, please see the General Cautions page.](#)
